

Mandatory information on principal adverse impacts on the climate and other environment-related adverse impacts of the consensus mechanism

S.1 Name	N	Field	Content		
S.2 Relevant legal entity identifier S.29900FYBTAGIOSS4M10	General information				
S.3 Name of the cryptoasset TRON	S.1	Name	tradias GmbH		
S.4 Consensus Mechanism	S.2	Relevant legal entity identifier	529900FYBTAGIOS54M10		
S.5 Incentive Mechanisms and Applicable Fees Aproof-of-Stake (PoS) consensus mechanism incentives validators to secure the network and validate transactions by staking their own crypto-assets as collateral. Validators are selected to create new blocks based on the amount of cryptocurrency they hold and are willing to 'stake', rather than through computational power. If Validators act honestly, they earn rewards through transaction fees; however, maticious behavior or proposing invalid blocks can lead to a reduction of their staked assets, creating an economic penalty that discourages misconduct and ensures network integrity. S.6 Beginning of the period to which the disclosure relates 2024-12-09	S.3		TRON		
Incentive Mechanisms and Applicable Fees	S.4		Proof of Stake (PoS)		
Applicable Fees incentivizes validators to secure the network and validate transactions by staking their own crypto-assets as collateral. Validators are selected to create new blocks based on the amount of cryptocurrency they hold and are willing to 'stake', rather than through computational power. If validators act honestly, they earn rewards through transaction fees; however, malicious behavior or proposing invalid blocks can lead to a reduction of their staked assets, creating an economic penalty that discourages misconduct and ensures network integrity.
